

A high speed vehicle  
is approaching this  
officer outside of  
his field of view.

**How can he be  
warned?**

Ranger® EZ  
has the answer:  
**SafetyZone™!**

With SafetyZone, Ranger EZ is the only radar designed to alert officers working out of their vehicles, on or near the roadway, of potentially-dangerous, high-speed vehicles.

When SafetyZone has been activated, Ranger EZ searches for any speeding vehicles that are close enough to be a threat. Ranger EZ then alerts the officer to the presence of the vehicle using a choice of alert methods.

SafetyZone uses Ranger EZ's exclusive ranging technology to minimize false alarms by excluding semis and other large vehicles that are far away from the patrol vehicle, and targeting fast threats that are within range, regardless of how small the vehicle is.

**MPH**®

(888) 689-9222

SafetyZone serves as a supplement to an officer's personal safety. While it improves the ability of the officer to safely monitor traffic during stops, it does not fully replace the need to remain alert to the surrounding traffic.
