# SpeedView™ Integrated Traffic Data Analysis System

POLICE RADAR • POLICE LASERS • SURVEY LASERS • SPEED SIGNS

## The SpeedView Integrated Traffic Data Analysis System

Available as an option on most MPH speed signs and trailers\*, allows your agency the ability to conduct analysis and enforcement in targeted areas when needed. Among the many uses of the collected data are determining peak road usage times, verification of community speeding complaints, comparison of the effectiveness of speed signs while on or off, and providing accurate information for when to deploy officers for traffic enforcement.

### SpeedView Analysis Software

- Analyze files without altering data
- Simple, menu-driven analysis
- Compiles tables and graphs of study data
- Print or export charts to other programs for reporting

\*For the Speed Monitor Full Matrix 3 Message Trailer, Speedview is available as an add-on device.

Operator viewing downloaded data via SpeedView Analysis Software

### SpeedView Integrated Traffic Data Analysis System Includes:

- Built-in SpeedView Traffic Computer
- Integrated Data Collection Software
- SpeedView Analysis Software - for analyzing/viewing downloaded data and report generation
- USB Flash Drive

## Features

- Speedview Traffic Computer is now available as an integrated option on all 12" and 18" speed signs and trailers.
- Large data storage capacity with simple download through integrated USB port or via optional Bluetooth®
- Stores vehicle speed, date and time. Data can be summarized in intervals of 5 minutes, hourly, daily or weekly.
- Measures vehicles in both directions of traffic.
- Data file information includes:
  - Start date/time, end date/time
  - Number of vehicles in each 5 mph range
  - Median, maximum, 85th percentile, average vehicle speeds and directions
  - Speeding vehicle information
  - Total number of vehicles
  - Maximum speed observed
  - Time, direction or speed-based analysis
